

TASK 1 MATCHING TASK

TERMS	Meanings
1. Databases	A. Fixing errors and issues in a program
2. Debugging	B. Organizing tasks efficiently to meet deadlines
3. Agile methods	C. Working together with others to achieve a common goal
4. Time management	D. A structured approach to software development that focuses on flexibility and collaboration
5. Teamwork	E. Writing and building software using programming languages
6. Databases	F. Online platforms or services used for storing and managing data remotely
7. Software development	G. Online communities where developers collaborate to create free software
8. Open-source projects	H. Structured collections of data used to store and manage information
9. Cloud tools	I. Different types of syntax and rules used to write programs (e.g., Python, JavaScript)
10. Coding languages	J. Finding and implementing solutions to complex challenges

READ AND ANSWER

"Hi everyone! Thanks for having me. I'm Jonathan Gardner, a student who loves building software that solves real problems. I enjoy working with teams and creating things, whether it's fixing bugs, coding new features, or contributing to open-source projects.

Let me tell you what I'm good at:

First, I learn fast. Technology changes quickly, and I'm always excited to pick up new tools or languages. For example, when I needed to switch from Python to JavaScript for a project, I jumped right in and learned it step by step.

Second, I love solving puzzles. If there's a tricky bug or a confusing problem, I won't give up until I fix it. But I also know teamwork matters—I listen to others, share ideas, and make sure everyone is on the same page.

Oh, and I love open-source projects! It's like coding with friends from around the world. I've fixed small bugs in free tools and even tried building new ones. It's fun and helps me learn!

Now, nobody's perfect, right? Here's what I'm working on:

Sometimes, I focus too much on tiny details. I might spend hours making one part of the code just right, only to realize later that I could have saved time by focusing on the bigger picture. I'm getting better at balancing quality and speed!

I also haven't worked on large company projects yet. Most of my experience is with smaller apps, but I'm learning about cloud tools and teamwork practices to prepare for bigger challenges. Time management is another area I'm improving—I'm practicing how to organize my tasks so I don't get overwhelmed.

As for my technical skills, I use Python, JavaScript, and Java daily. I build websites with tools like React.js and Node.js, work with databases like MySQL and MongoDB, and use tools like Git and Docker to keep things running smoothly. I also love Agile methods—breaking work into small steps and checking in with the team regularly.

To sum it up: I'm a coder who loves solving problems, working with others, and learning new things. I'm here to build useful software, help others, and grow as a developer.

Thanks for listening! Feel free to ask me anything!"

TASK 2: Reading Comprehension

Read the passage carefully and answer the following questions:

1. What are Jonathan's main strengths as a developer?
2. What challenges is he working on improving?
3. Why does Jonathan enjoy working on open-source projects?
4. Which programming languages and tools does he use?

How does Jonathan approach learning new technologies?

TASK 3 Writing Task

Write a short paragraph about your own skills, strengths, and areas for improvement using correct grammar and sentence structure.
